Transforming

In this notebook, we will explore how to use Large Language Models for text transformation tasks such as language translation, spelling and grammar checking, tone adjustment, and format conversion.

Setup

```python
import openai
import os

from dotenv import load_dotenv, find_dotenv
_ = load_dotenv(find_dotenv()) # read local .env file

openai.api_key  = os.getenv('OPENAI_API_KEY')
```

```python
def get_completion(prompt, model="gpt-3.5-turbo", temperature=0):
    messages = [{"role": "user", "content": prompt}]
    response = openai.ChatCompletion.create(
        model=model,
        messages=messages,
        temperature=temperature,
    )
    return response.choices[0].message["content"]
```

Translation ¶

ChatGPT is trained with sources in many languages. This gives the model the ability to do translation. Here are some examples of how to use this capability.

```python
prompt = f"""
Translate the following English text to Spanish: \
```Hi, I would like to order a blender```
"""
response = get_completion(prompt)
print(response)
```

```python
prompt = f"""
Tell me which language this is:
```Combien coûte le lampadaire?```
"""
response = get_completion(prompt)
print(response)
```

```python
In [ ]: prompt = f"""
Translate the following  text to French and Spanish
and English pirate: \
```I want to order a basketball```
"""
response = get_completion(prompt)
print(response)
```

```python
In [ ]: prompt = f"""
Translate the following text to Spanish in both the \
formal and informal forms:
'Would you like to order a pillow?'
"""
response = get_completion(prompt)
print(response)
```

Universal Translator

Imagine you are in charge of IT at a large multinational e-commerce company. Users are messaging you with I
issues in all their native languages. Your staff is from all over the world and speaks only their native languages.
You need a universal translator!

```python
In [ ]: user_messages = [
  "La performance du système est plus lente que d'habitude.",  # Sys
  "Mi monitor tiene píxeles que no se iluminan.",              # My
  "Il mio mouse non funziona",                                 # My
  "Mój klawisz Ctrl jest zepsuty",                             # My
  "我的屏幕在闪烁"                                              # My
]
```

```python
In [ ]: for issue in user_messages:
    prompt = f"Tell me what language this is: ```{issue}```"
    lang = get_completion(prompt)
    print(f"Original message ({lang}): {issue}")

    prompt = f"""
    Translate the following  text to English \
    and Korean: ```{issue}```
    """
    response = get_completion(prompt)
    print(response, "\n")
```

Try it yourself!

Try some translations on your own!

```python
In [ ]:
```

Tone Transformation

Writing can vary based on the intended audience. ChatGPT can produce different tones.

```
In [ ]: prompt = f"""
        Translate the following from slang to a business letter:
        'Dude, This is Joe, check out this spec on this standing lamp.'
        """
        response = get_completion(prompt)
        print(response)
```

Format Conversion

ChatGPT can translate between formats. The prompt should describe the input and output formats.

```
In [ ]: data_json = { "resturant employees" :[
            {"name":"Shyam", "email":"shyamjaiswal@gmail.com"},
            {"name":"Bob", "email":"bob32@gmail.com"},
            {"name":"Jai", "email":"jai87@gmail.com"}
        ]}

        prompt = f"""
        Translate the following python dictionary from JSON to an HTML \
        table with column headers and title: {data_json}
        """
        response = get_completion(prompt)
        print(response)
```

```
In [ ]: from IPython.display import display, Markdown, Latex, HTML, JSON
        display(HTML(response))
```

Spellcheck/Grammar check.

Here are some examples of common grammar and spelling problems and the LLM's response.

To signal to the LLM that you want it to proofread your text, you instruct the model to 'proofread' or 'proofread and correct'.

```python
In [ ]: text = [
          "The girl with the black and white puppies have a ball.",  # The g
          "Yolanda has her notebook.", # ok
          "Its going to be a long day. Does the car need it's oil changed?",
          "Their goes my freedom. There going to bring they're suitcases.",
          "Your going to need you're notebook.",  # Homonyms
          "That medicine effects my ability to sleep. Have you heard of the
          "This phrase is to cherck chatGPT for speling abilitty"  # spellin
        ]
        for t in text:
            prompt = f"""Proofread and correct the following text
            and rewrite the corrected version. If you don't find
            and errors, just say "No errors found". Don't use
            any punctuation around the text:
            ```{t}```"""
            response = get_completion(prompt)
            print(response)
```

```python
In [ ]: text = f"""
        Got this for my daughter for her birthday cuz she keeps taking \
        mine from my room.  Yes, adults also like pandas too.  She takes \
        it everywhere with her, and it's super soft and cute.  One of the \
        ears is a bit lower than the other, and I don't think that was \
        designed to be asymmetrical. It's a bit small for what I paid for it
        though. I think there might be other options that are bigger for \
        the same price.  It arrived a day earlier than expected, so I got \
        to play with it myself before I gave it to my daughter.
        """
        prompt = f"proofread and correct this review: ```{text}```"
        response = get_completion(prompt)
        print(response)
```

```python
In [ ]: from redlines import Redlines

        diff = Redlines(text,response)
        display(Markdown(diff.output_markdown))
```

```python
In [ ]: prompt = f"""
        proofread and correct this review. Make it more compelling.
        Ensure it follows APA style guide and targets an advanced reader.
        Output in markdown format.
        Text: ```{text}```
        """
        response = get_completion(prompt)
        display(Markdown(response))
```
